

Xiaflex® (collagenase) (Intralesional)

Effective Date: 01/01/2020

Review Date: 12/12/2018, 11/27/2019, 1/29/2020, 11/16/2020, 7/22/2021, 5/5/2022, 1/26/2023, 12/07/2023, 01/10/2024

Scope: Medicaid, Commercial, Medicare-Medicaid Plan (MMP)

I. Length of Authorization ¹

- Dupuytren's Contracture: Coverage will be for 3 months and is eligible for renewal for a maximum of 3 injections per joint/cord.
- Peyronie's Disease: Coverage will be for 6 weeks and is eligible for renewal for a maximum of 4 total treatment cycles for each plaque causing the curvature deformity.

II. Dosing Limits

A. Quantity Limit (max daily dose) [NDC Unit]:

- Xiaflex 0.9mg injection: 2 vials per 28 days

B. Max Units (per dose and over time) [HCPCS Unit]:

Dupuytren's Contracture

- 180 billable units every 28 days

Peyronie's Disease

- 180 billable units every 42 days

III. Summary of Evidence

Xiaflex (collagenase clostridium histolyticum) is an FDA-approved medication primarily used for the treatment of Dupuytren's contracture and Peyronie's disease. Xiaflex has demonstrated significant improvement in contracture reduction compared to placebo, as well as increased range of motion in affected joints. In Peyronie's disease, Xiaflex has been shown to reduce penile curvature deformity and improve sexual function compared to placebo. Common adverse events include injection site reactions, swelling, bruising, and pain.

IV. Initial Approval Criteria ¹

Coverage is provided in the following conditions:

MMP members who have previously received this medication within the past 365 days are not subject to Step Therapy Requirements.

- Patient is at least 18 years old; **AND**

Dupuytren's Contracture † Φ¹⁻³

- Patient has a palpable cord; **AND**
- Documented flexion contracture of 20° to 100° in a metacarpophalangeal (MP) joint or 20° to 80° in a proximal interphalangeal (PIP) joint; **AND**
- Documentation of a positive “table top test” defined as the inability to simultaneously place the affected finger(s) and palm flat against a table top; **AND**
- Patient has not received a surgical treatment (e.g., fasciectomy, fasciotomy) on the selected joint within 90 days before the first injection; **AND**
- Documentation that the flexion deformity results in functional limitations

Peyronie's Disease † Φ^{1,4-6}

- Prescriber is enrolled in the Xiaflex REMS Program; **AND**
- Patient has a palpable plaque on penis; **AND**
- Patient has stable disease with penis curvature deformity of > 30 and < 90 degrees; **AND**
- Patient has intact erectile function (with or without use of medications); **AND**
- Patient does not have a ventral curvature deformity, an isolated hourglass deformity or calcified plaque; **AND**
- The plaque(s) do not involve the penile urethra; **AND**
- Will be used in combination with penile modeling procedures; **AND**
- Patient has not exceeded 4 treatment cycles for each plaque causing the curvature deformity; **AND**
- The patient has not received a collagenase injection for this condition within the past 6 weeks

† FDA-labeled indication(s); Φ Orphan Drug

V. **Renewal Criteria**¹

Coverage can be renewed based upon the following criteria:

- Patient continues to meet indication-specific relevant criteria identified in section III; **AND**

Dupuytren's Contracture

- Absence of unacceptable toxicity from the drug. Examples of unacceptable toxicity include : hypersensitivity reactions (including anaphylaxis), abnormal coagulation, tendon ruptures or other serious injury to the injected extremity, vasovagal reactions (e.g., syncope and presyncope), etc.; **AND**

- Disease response as indicated by reduction in contracture of the selected primary joint compared to baseline; **AND**
- Patient has not exceeded 3 injections per joint/cord; **AND**
- Patient has not received a collagenase injection for this condition within the past 4 weeks

Peyronie’s Disease

- Absence of unacceptable toxicity from the drug. Examples of unacceptable toxicity include : hypersensitivity reactions (including anaphylaxis), abnormal coagulation, corporal rupture (penile fracture) or other serious injury to the penis, acute post-injection back pain reactions, vasovagal reactions (e.g., syncope and presyncope etc.; **AND**
- Disease response with treatment as defined by the reduction in curvature of the penis compared to baseline or improvement in Bother domain score of the Peyronie’s Disease Questionnaire (PDQ); **AND**
- Patient continues to have penis curvature deformity $\geq 15^\circ$ after previous treatment cycle(s); **AND**
- Patient has not exceeded 4 total treatment cycles for each plaque causing the curvature deformity; **AND**
- Patient has not received a collagenase injection for this condition within the past 6 weeks

VI. Dosage/Administration

Indication	Dose
Dupuytren’s Contracture	Inject 0.58 mg into each palpable cord with a contracture of a metacarpophalangeal (MP) joint or a proximal interphalangeal (PIP) joint. <ul style="list-style-type: none"> • Up to two joints/cords in the same hand may be treated during a treatment visit. If a patient has other cords with contractures, those cords must be treated at another visit. • May administer up to 3 injections total per cord at approximately 4-week intervals.
Peyronie’s Disease	Each treatment cycle entails injection of 0.58 mg into the target plaque on a flaccid penis once on each of two days, 1 to 3 days apart, according to the injection procedure. <ul style="list-style-type: none"> • For each plaque causing the curvature deformity, up to four total treatment cycles may be administered. Each treatment cycle may be repeated at approximately 6 week intervals. • If the curvature deformity is less than 15 degrees after the first, second, or third treatment cycle, or if further treatment is not clinically indicated, then subsequent treatment cycles should not be administered

VII. Billing Code/Availability Information

HCPCS Code:

J0775 – Injection, collagenase, clostridium histolyticum, 0.01 mg: 0.01 mg = 1 billable unit

NDC:

Xiaflex 0.9 mg powder for injection: 66887-0003-xx

ICD-10	ICD-10 Description
M72.0	Palmar fascial fibromatosis [Dupuytren]
N48.6	Induration penis plastica

Appendix 2 – Centers for Medicare and Medicaid Services (CMS)

Medicare coverage for outpatient (Part B) drugs is outlined in the Medicare Benefit Policy Manual (Pub. 100-2), Chapter 15, §50 Drugs and Biologicals. In addition, National Coverage Determination (NCD), Local Coverage Articles (LCAs), and Local Coverage Determinations (LCDs) may exist and compliance with these policies is required where applicable. They can be found at: <http://www.cms.gov/medicare-coverage-database/search/advanced-search.aspx>. Additional indications may be covered at the discretion of the health plan.

Medicare Part B Covered Diagnosis Codes (applicable to existing NCD/LCA/LCD): N/A

15	KY, OH	CGS Administrators, LLC

Policy Rationale:

Xiaflex was reviewed by the Neighborhood Health Plan of Rhode Island Pharmacy & Therapeutics (P&T) Committee. Neighborhood adopted the following clinical coverage criteria to ensure that its members use Xiaflex according to Food and Drug Administration (FDA) approved labeling and/or relevant clinical literature. Neighborhood worked with network prescribers and pharmacists to draft these criteria. These criteria will help ensure its members are using this drug for a medically accepted indication, while minimizing the risk for adverse effects and ensuring more cost-effective options are used first, if applicable and appropriate. For INTEGRITY (Medicare-Medicaid Plan) members, these coverage criteria will only apply in the absence of National Coverage Determination (NCD) or Local Coverage Determination (LCD) criteria. Neighborhood will give individual consideration to each request it reviews based on the information submitted by the prescriber and other information available to the plan.
