## **Required Medical Information**

- Members who have opioids prescribed for pain associated with a cancer diagnosis, terminal condition, sickle cell disease or pain being managed through hospice or palliative care shall have access to the medication.
- Members who are opioid naïve shall not exceed thirty (30) morphine milligram equivalents (MMEs) total daily dose per day for a maximum total of twenty (20) tablets per the State of Rhode Island Opioid prescribing laws.
- The patient has tried and failed non pharmacologic therapy and non-opioid therapy to treat their pain AND has tried non pharmacologic therapy and/or non-opioid therapy in combination with a LOW DOSE opioid.
- The prescriber attests to understanding the findings of the CDC's Guideline for Prescribing Opioids for Chronic Pain (2016, 2017) and the CDC's Clinical Practice Guideline for Prescribing Opioids for Pain (2022) which concluded that long term opioid therapy is associated with increased risk for serious harm (opioid use disorder, overdose, & death) in a dose-dependent manner: ≥ 50 MME significantly increases risk for harm & indicates need to reassess; ≥ 90 MME sharply increases risk for harm & requires justification of risk; ≥ 200 MME is associated with Overdose (OD) death
- The prescriber attests and acknowledges that the risk of serious harm is markedly increased with concurrent use of benzodiazepines (BZD) and other Central Nervous System (CNS) depressants.
- The prescriber attests that the patient has a prescription for or is in possession of naloxone.
- The prescriber attests that they have counseled the patient (and patient cohabitants, if available) on how to obtain and administer naloxone.

## Renewal Criteria

• The original opioid dosing has been titrated down from the initial authorization or in the prescriber's clinical opinion it is inappropriate to decrease the dose for this member.

## Non-formulary

• The patient has tried and failed 2 formulary alternatives, or formulary alternatives would not be appropriate (contraindication, adverse effect, etc.).

**Coverage Duration:** All approvals x 1 year.

Review Date: 7/2020, 6/2021, 5/2022, 9/2022, 6/2023, 4/2024

Providers seeking dosages over the Post Quantity Limits below need to provide Neighborhood with documentation as to why

such dosages are necessary.

## **Opioid Analgesics Quantity Limits Chart**

The duration of 26 days is used for a 30-day fill period to allow time for refill processing. Limits are set up as daily dose edits.

If the quantities also exceed the initial quantity limit of the product recommended dose, 90 MME/day, 4 g/day of acetaminophen or aspirin, or 3200 mg/day of ibuprofen, then a rejection will occur. If the patient is requesting more that the initial quantity limit, then the claim will reject with a message indicating that quantity limits are exceeded.

	Authorization Limit (Post Limit QL)
Drug/Strength	Daily Dose (number of tablets, capsules or milliliters per day) that should be entered on the authorization: 200 MME/day, 4 g acetaminophen or aspirin, 3200 mg ibuprofen, or FDA Max Dose (whichever is less)
	Example: Oxycodone 30 mg 4 tablets per day has a limit of 180 MME per day (Approvals above 200 MME/day are based on clinical judgment)
APAP/codeine soln 120-12 mg/5 mL	165 mL (60 MME/day)
APAP/codeine susp 120-12 mg/5 mL	165 mL (60 MME/day)
